

Future-proof and economical: Retrofit kits for CLM controls

The CLM position control has been tried-and-tested for many years in tens of thousands of applications. But the pace of progress is high, especially in control technology. The production of the CLM1.2/CLM1.3 was discontinued in 2012 and the controls can be serviced to a limited extent only. The consequence: In the event of a failure, you must find a replacement solution under a great amount of time pressure. We will gladly show you economical and technical alternatives before a failure occurs.

Two possibilities for guaranteed high uptime

We offer you two application-dependent retrofit solutions that bring your application perfectly up-to-date:

- ▶ The IndraMotion MLD-M drive-based retrofit solution with Sequential Motion Control
- ▶ The IndraMotion MLC controller-based retrofit solution

For both variants we provide you with standard retrofit kits for hardware and software that cover 90 percent of all cases of application and ensure long-term availability with minimal effort.

Minimal engineering effort and new possibilities

With a high level of function compatibility, we make the conversion particularly easy for you. With our IndraMotion MLD-M retrofit solution, you have access to the familiar programming look and feel using an editor. In addition, we are opening up a variety of new possibilities for you. With the integrated OPC UA server you can access all drive data and extended diagnostic functions. Furthermore, you can create functions programmed in high-level languages and connect your application seamlessly with your company IT.

Act now

Simply contact us. We will analyze your application and help you to ensure economical and long-term machine uptime.

Your benefits

- ▶ Maximum system uptime thanks to the latest drive and control technology
- ▶ Seamless changeover to a functionally compatible successor solution thanks to pre-defined retrofit kits
- ▶ Rexroth as your partner for all your service questions on a comprehensive range of services
