

Making machine tools better

The Rexroth Update Service makes custom-made machines available, networkable and with longer service lives

Tailored service portfolio: Rexroth Service for machine tools.

Many machine tools last for half an eternity. However, only with regularly modernized technology are they able to fulfill production specifications and remain operational. With Rexroth Service at your side you'll achieve productivity goals with noticeably less effort. A service package customized to your needs maximizes availability, allows for preventative maintenance concepts and intelligent networking – and extends the operational capacity of your machines at the same time.

Analysis and consultation – for maximum availability

Our specialists analyze your machines in detail – including system inspections, performance/functional specifications, CE conformity – and advise you comprehensively. We give advice about which components should be preventatively overhauled, replaced or modernized.

Optimization – ideally across technologies

Whether with special retrofit packages for CNC or PC upgrades, overhauls with a five year service capability extension, NC simulations or also condition monitoring – Rexroth thinks of service across technologies.

Retrofitting – also for individual components

Regardless of manufacturer, we exchange individual components for modern, more powerful parts. With only a little effort you can bring productivity, reliability, maintenance capabilities, energy efficiency and connectivity up to the state-of-the-art.

Service contracts – individual and economical

Whether its modernization, overhaul or replacement, we will happily put together an individual service package with you. Benefit from the know-how of the technology leaders. And all this throughout the whole life cycle of your machines. In the Drive & Control Academy we also offer practical education and further training for your employees.

Your benefits:

- ▶ Maximum system availability throughout the complete life cycle
- ▶ Higher productivity: shorter cycle times, better quality, fewer rejects
- ▶ Costs: cost-effective modernization instead of new investment
- ▶ Optimized operation: higher energy efficiency and safety
- ▶ Future-proof: incorporation in IT network
- ▶ Preventative maintenance to avoid standstills
- ▶ Predictable maintenance costs
- ▶ Individually customized service packages
- ▶ Cost-effective service from a single source: direct from the technology leaders
